Law in present Day

Cheraku Mahathi

ABSTRACT

Law in present day going to be one of the biggest challenges now. Why because we all know that law is like father of nation one can't abort or ignore it. It applies to everyone right from the mother's womb to till our last breath. Because of law still people are been United and maintaining peace in the country. We also know that rendering justice system is very delay because of long procedure to be followed and justice is delayed but not denied. How this covid 19 leads to impact on the judiciary system? Like there are 3important things like E-conference, E-filing and most important thing is still in developing Arbitration process. We are easy to adopt the easy things which gives us happiness and fulfilling our requirements. Like advancement of technology and adopting different cultures like every right is given us more than what one needs. But in the light of judiciary system is still in the process of adopting the things of advancement in the case proceedings and We all know the fact that they are millions of cases are still in pending in whole India. Let's look more into it.

INTRODUCTION

Law is just like deep ocean lot more to know and lot more to improve. Law is like set of rules which everything is manmade. In olden days kings were the rulers and people are just use to nod their head and follow the instructions. Later on, people started changing of their mind-set because one always wants to be free bird just want to do what he needs. Then law which actually means rules one had to follow and obey which has become the objective slowly which lead to finally democratic i.e. government is most important thing. Do you think really it's people government I never seen because we are always been influence by others and even in the same form of government or different governments had come and try to change the things but it's very difficult because I have seen the political issues more and changes for the betterment of society is less.

ANALYSIS

Law amendments and different books are always been published regarding law. How far this can be reached to the common people of this country. To be fact that one never wants to know what going around the world only who are related to the government or who are aspirants who prepare for the civil services. What kind of knowledge we are pushing on the society? It's very difficult to have answers because there is no such amendment or policy where the whole country is bowed and accepted to it always there will be some people who disagree with it. We people always want to live for today and save for future and money plays a vital role for everyone life. Law is initially use to be in very rare only one who commits crime and one who violates law. But now law become need and crucial part of our daily life because we live in the living contract between human beings and government. So, take the India is the best example to us. We have people with different needs and different cultures and different problems in off. Our country and also many other countries always judicial system is very low in aspect of processing the case judgments. We have technology to adopt and people are ready to change for the

advancement and betterment of society. Why the judiciary has lacking to implement the technology in the judicial system. Judiciary adopts more in the light of four things as mentioned earlier. Also making the most concern department for adoption of this things to be recruited and trained for the advocates and judges.

1. E-conference
2. E-filing
3. Arbitration process
4. Data analysis in judicial system

This are the 4 things need to be in advance In the fast forward justice and also for the development of the society.

IMPORTANCE

Let's discuss in detail that how these four things play role a role in LAW which is interlinked with the people life.

1. E-conference: This is the foremost important for the crucial cases like commercial contracts and in the fields of business operations because in our count runs mostly with business development. This will make the time saving and fast reliable on the decisions taken by the concern judges. Also, we can convert the sub judicial systems like consumer protection law can be converted into the E-conference proceedings and also fast track cases like matrimonial cases those who want to take the Mutual consent and divorce.
2. E-filing: we have already this advanced tool to file the case in online mode but E-filing makes the data saved and accurate and also gives the courts about the basic information of the case.
3. Arbitration process is one the emerging tool in the advantage for the contracts for the business people who can solve their dispute. Need to have a seat of arbitration in our India also.

4. Data analysis and protection laws in the judiciary system plays a role where the world is running on the complete data and online automatic systematic was incorporated.

Above things are need to be advantageously used in the fields of judicial system and case proceedings, it saves the huge time save and runs the system smoothly and efficiently by keep the data protection. Law in present is very much to be developed and the courts to be changed the system of proceedings. We also made some steps like traffic fine payments in online is also gives a great impact on the society and changed the time and make the system smoothly.

Law is the basic as first words I said can't ignore it. And this COVID-19 situation makes the arbitration process in online in international. Law in present day can be seen by live example by the making the online world is running we don't pause the life. Because some things to be manually done also can be done through the online mode. Online application by zoom, webinar, writing articles acknowledge to the people by the mostly through online process by news articles and many ways. Law in present will be more advanced by taking the steps of the above four and many changes can come in future. Lawyer lays a role in this COVID-19 situation.

Also, we should look into the prospective by the infrastructure, people and marketing but we started initially we started but not completely adopted as many things to be learned and it is very useful for the upcoming generation to deal with cases. As it creates the employment and encouragement.

CONCLUSION

Today world is full of energy and great desire and aspirations for learning the new things in the world. Special for the young generation who always create the new things in life and more changes for the rights and wrong . Law process and easy for approach for the common man and can take the country to be first to solve the cases because we need to close the cases as soon as because increasing cases in the country may lead the good impact on the judiciary system fails to do it's duty. It loses the belief in the law which leads to the downfall of the government. Most important thing is law in politics should also be changed and there should make the young generation views to be considered and the beauty of the government gave right to vote where most of the population not using the right and choose the best government which gives the advancement and hope for the upcoming generation. Also the language of the court proceedings should be changed according to the needs of people and the most important thing is law field is always keep the evidence and all to be put in online where it gives large data can be saved and paper saved. Also the most important thing is It gives more transparent to the general public in the cases where the courts deal with be honest no chances of any loop holes to be adopted and make more useful for the people. Judiciary is most important tool to resolve our dispute between two individuals cause by in the way of life. On the other side it is difficult to deal with the criminal cases but In the civil cases it is very easy for the government to make laws strengthen for the advancement steps to be taken and it necessary for the advancement and well-being of the people.
